

Take the CheckUp Test to learn how to get your cover up to snuff; or if all signs point to a new cover, call us!

VINYL

Dry? Brittle? Dirty? Torn? Cracked?

These symptoms will affect the safety, heat retention and beauty of your cover in addition to the cleanliness of your spa water. Torn, cracked vinyl can't be repaired easily; if it is dry and brittle, no repair is possible. Condition and clean your top vinyl monthly, according to your owners manual.

HINGE

TORN?

Precious heat can escape if a hinge tear goes beyond the Heat Seal Shoe (appx 2" in from the outside edge). If your hinge is torn less than 6", it may be repairable; we can assist you. Over 6", we recommend a new cover.

HEAT SEAL SHOES

TORN? DAMAGED?

The "Shoes" seal the gap where the two halves of the cover come together, preventing heat loss at the hinge. If a Shoe is torn away from the hinge, or damaged, consider having it re-stitched. First remove the foam cores from the vinyl cover. If the Shoe is very badly damaged you may need a new cover. Call us for recommendations.

FOAM CORES

Sagging? Indicates broken foam cores; need replacement.

Puddles? Suggests broken core, or bowed core; need replacement.

Heavy? Indicates cores have absorbed water; need replacement.

Sagging cores create gaps in the seal; puddles get worse over time, causing the foam to break under the weight of the accumulating water. This can also cause the metal channel to break, and vinyl to tear. Saturated covers will not dry out.

Foam cores are critical to heat retention and safety. Cores can be replaced, but not recommended for covers over two years old. The vinyl shrinks from exposure, making replacement difficult.

- Foam Cores _____
- Straps & Locks _____

Worn or Torn?
Sagging, Fading or Cracking?
Waterlogged and Heavy to Lift?
Not Fitting Snugly?
Not Sealing Properly?
Your spa is using more energy ... and, costing you more ... than it should!

STRAPS & LOCKS

Torn? Broken? Missing?

You are risking the safety of your hot tub if your adjustable tie down straps are not in good condition. Check the condition of your locking hardware, also.
