

In-Ground Pool Opening Instructions

TEDDY BEAR POOLS & SPAS

1. Use an electric sump pump (always place a Frisbee or similar object under the pump) or siphon the water off of your cover if you have a solid cover.
2. Carefully remove any debris off of the cover.
3. Remove the cover slowly from the deep end to the shallow end. Try not to get any water or debris that may be on your cover into the pool.
4. Bring your water level to half-skimmer and remove any leaves or other debris from the pool with a leaf net. Expect your water level to be low in your pool. (This occurs due to ice and water displacement.)
5. Reinstall any filter plugs and fittings. Also, remove "all" winter plugs from the wall fittings in the pool as well as any "Gizmo's" from your skimmers. **IMPORTANT:** Do not worry if you have any anti-freeze in your lines. It is non-toxic and biodegradable.
6. Check your pump, skimmer, and filter to be sure they are in proper working condition. Be sure that the O-ring on your hair and lint trap basket cover is lubricated with a silicone/water based lubricant and not worn out.
7. Install your pump on the base with two pump mounting screws and connect your ground wire. Set your filter on the base and connect the union between the pump and filter.
8. Connect the pump suction hose to the skimmer and the return hose to the outlet. (If you have a chlorinator, connect the 2 hoses and be sure the flow is going in the right direction through chlorinator. Make sure the saddle fitting clamps are tight) (If you have an ECOsmarte connect the chamber into the plumbing in the correct direction and connect the control box wires to the corresponding connections on chamber)
9. Prime your filter by adding water directly to your hair and lint trap basket (by your pump and motor). Secure the cover and tighten all plastic fittings by "hand". Make sure 1 valve is in the "open" position and turn on the electricity. On systems with more than 1 suction, it may be easier to prime with only 1 suction open.
10. Install the skimmer basket, skimmer weir and the ladder into its flanges. If you have drop-in-steps, place the sand bags (in the protective plastic bags) into the stairs and lower the stairs into the pool on to a ladder mat and then connect the handrail.
11. Let the pump/strainer housing fill with water. Turn on your filter system. **IMPORTANT:** Make sure that all of the electrical connections are grounded first. Test your GFCI.
12. If you have a D.E. Filter, add the proper amount of Diatomaceous Earth to the skimmer with the filter system running. (For more information see the operating your D.E. filter handout) You may have to bump the DE filter several times in the first 24 to 48 hours.
 - a. Hayward EC 65 requires 6 LBS of DE or 6 DE scoops
 - b. Hayward EC 75 requires 7 LBS of DE or 7 DE scoopsFor your convenience, we carry one (1) pound D.E. cups in our retail store.

If you have a cartridge filter, be sure the cartridge is installed correctly. (For more information, see operating your Cartridge filter handout.)

If you have a Sand Filter, make sure the drain plug is installed.

Properly fill with filter sand.

- a. Backwash the filter first.
 - a. Shut off the pump.
 - b. Move the valve handle to the filter position and then turn the pump on.
 - c. We recommend replacing your filter sand a minimum of every two years.

NOTE: Always turn off your pump when moving the valve handle.

13. You should now add all of your chemicals from your Teddy Bear Pools opening kit. It is important that you use all of the chemicals that are contained in your kit. When adding your opening chemicals, it is not necessary to wait in between chemical applications. It is best to walk around the perimeter of the pool slowly when adding the chemicals to assure more even distribution.
 - POOL WATER CLARIFIER--The purpose of this product is to coagulate fine dirt, silt and other contaminants so that your filter will more readily remove them from your water.
 - BEAR ALGAE OUT is a broad spectrum non-foaming algaecide used to inhibit algae from growing. Add directly by walking around the perimeter of the pool surface.
 - BEAR SHOCK 56 is a very effective stabilized chlorine shock that is soluble in water with no residual. It kills bacteria and algae. Pre-dissolve it in a plastic bucket by adding water to the bucket. Then, add the Bear Shock and stir it in with a wooden stick. If any shock remains on your pool bottom, brush it until it dissolves. For best results, add it to your pool in the evening. DO NOT use your solar blanket on the pool for 24 hours after adding shock to your pool.
14. Do not vacuum your pool for at least 24 hours. If you have a lot of debris on the bottom of the pool, make sure that you vacuum on waste or with the backwash open.
15. Let your opening chemicals circulate throughout the pool for 24-48 hours
16. Clean your cover with "Teddy Bear Cover Cleaner" to prevent sticking, mildew, algae, or unpleasant odors.

NOTE: When cleaning your cover you should not place the cover on top of Grass.

 - a. Fold cover and store in your basement. It should not be stored in a shed or the garage. Ants or mice may destroy your cover!! We recommend placing it in a large Rubbermaid tub with a lid.
17. Bring a water sample to the store for analysis. Remember to bring a list of chemicals that you have at home with you. Please utilize our free water sample bottle or use a CLEAN QT plastic container. Do not use empty chemical containers.
18. Each spring, you should replace any old testing solutions. We recommend replacing your DPD #1 and Phenol Red on a yearly basis to achieve more accurate results when testing your water. Do not use OTO Reagent for chlorine. It gives you your total chlorine level, not your free chlorine level.
19. REMEMBER, water balance is critical to your pool, plumbing and water "health" just as changing your oil and tuning your engine is critical to the proper operation of your vehicle. You'll have safe, non-corrosive water and you'll need less maintenance.
20. REMEMBER, to always read and follow the product instructions on all pool chemicals.

If you have any questions, do not hesitate to call us at (413) 594-2666 or (800) 554-BEAR.

Thank you for your patronage and continued support.
